Iris can be transplanted at any time during the season except when the ground is frozen or when in bloom. The ideal planting season, however, follows the blooming season. When planted from July first to early Fall the plants will have ample time to re-establish themselves before winter.

As a garden flower Iris is easy to grow and thrives in most any soil. Its recent rapid gain in popularity

is evidenced by the continued strong wholesale demand and the numerous Iris shows being held by local "Fans" throughout the country.

Our list includes the Tall Bearded as well as Beardless varieties. The Orientalis Irises (June blooming) are particularly attractive. We will have wholesale offerings of Japanese Iris for 1924 delivery.
